

School Summary Report

QUICK USER GUIDE

The DreamBox Learning School Summary Report can help to inform instructional practice with a window into how each classroom's use and progress varies.

You'll find the data you need to identify potential training or technology issues standing in the way of greater participation and progress. And by taking a look at who is using the program the most effectively, you can pinpoint best practices and replicate them across grades and classrooms.

Tips for Using Your School Summary Report

- **Compare average hours** on program, lessons and units complete for all classrooms.
- **Modify the report settings** to meet your needs. Select to view only all classes at a single grade level and toggle between average hours per student on the program and total hours for all students in a class. Sort your view to see classes with the most time on DreamBox or the most lessons or units completed.
- **Customize the date range** to your school calendar to compare use and progress on program by semester, quarter or school year.
- **Drill down** to view students in a single classroom. Select the classroom from the drop down menu to review individual student hours and progress.
- **Review differences in progress over time** for classrooms or individual students.
