

Usage Over Time Report

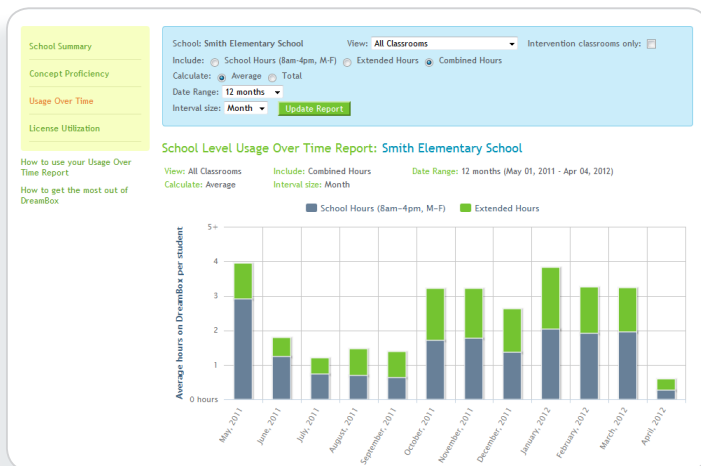

QUICK USER GUIDE

The Usage Over Time report illustrates the amount of time students are spending on DreamBox, both during the traditional school hours of 8am to 4pm and at other times, including before school, after school and on evenings and weekends. You'll have a firm read not only on how often DreamBox is being used but also how that usage varies by classroom. Most importantly you can recognize those classrooms getting the most out of the DreamBox program.

Tips for Using Your Usage Over Time Report

- **Review weekly average time** on the program to understand if classrooms are using DreamBox to your expectations. Are most students spending 30, 60 or 90 minutes per week on DreamBox? Does time on DreamBox vary significantly by classroom?
- **Understand varying use patterns** and uncover best practice implementations. Select the daily interval view to review use patterns over the last week or month. Are students using the program each day for 20 minutes or logging in once a week for an hour? Is there a classroom utilizing DreamBox more effectively that can share best practices?
- **Compare time spent on DreamBox** during school hours and before school, after school and on evenings and weekends. Are students taking advantage of access to the program outside of school hours? Do some classrooms use DreamBox on evenings and weekends more than others? Is there an access equity issue that can be addressed by creating a DreamBox after school program?
