

# Who Said Mastering Mathematics Can't Be Fun!

## Welcome to DreamBox Learning!

DreamBox Learning is an online math program being used in your child's classroom. This software can also be accessed from home through most Internet browsers that support Adobe Flash, so the learning can continue outside of school hours. DreamBox empowers students to master key concepts, increase achievement, and accelerate learning—all of which helps them develop confidence in mathematical subjects.

As your child works on DreamBox, the program will continually assess how well they are working and will give them the most suitable follow-up lesson based on if they struggled or excelled. This means that every child has an individualized progression through the curriculum and will be consistently presented with an appropriately challenging lesson.

## What resources are available to me as a parent?

As a parent, you will have access to a "Parent Dashboard" that will allow you to view your child's progress through the DreamBox curriculum. You'll be able to see how proficient they've become in different mathematical topics, as well as see notifications if your child is struggling. A letter with instructions from the school will arrive when this resource is available.

## What can I do to support my child?

To better understand how to help your child succeed in DreamBox, visit our online Support site at: [homehelp.dreambox.com](http://homehelp.dreambox.com). Enter "gettingstarted" into the Search field to bring up four articles that will walk you through what you need to know.

Also, once your "Parent Dashboard" is available, checking it at least once a week is highly recommended so that you can see what your child is working on and offer congratulations on accomplishments. You can celebrate milestones together when lessons are completed, badges or certificates are earned, and content is mastered.
